

FEATURES

- Secure stand-alone facility
- ID Card security access throughout the facility
- 24/7 video monitoring throughout the facility
- We maintain a flawless record of daily pickup and deliveries
- HIPAA Compliant Security

SECURE FACILITY

SyTech's stand-alone production facility is not shared with any other tenant. SyTech hired a consultant who designs security systems for banks to help design our production facility. Our building was designed and constructed specifically with record and data security in mind.

All exterior doors and windows are hard wired with alarms. Access to all entry points into and within the production facility is protected by electronic access control mechanisms which allow only authorized individuals to enter the production area.

SyTech's facility has over (40) security cameras in place throughout all critical areas, both inside and out of our building. We also have in place a perimeter security gate protecting the building and parking lot that is only open during business hours.

SECURE TRANSPORTATION

Although it has never been required, in case of emergency, our vehicles are equipped with hidden transponder devices that, when enabled, show the GPS coordinates of the vehicle to protect records during transport and to assist police in its recovery.

CONFIDENTIALITY

SyTech staff adheres to strict confidentiality standards and undergoes regular training to ensure the highest industry standards are met, including security and review for the Health Insurance Portability and Accountability Act (HIPAA), California State law, Federal law, and the Sarbanes Oxley Act (SOX).

All of SyTech's employees have executed confidentiality agreements that protect the documents of third parties. Our secure production facility is protected with restricted access, 24/hour surveillance, biometric locks, and access is restricted to employees only.
